

Ibstock brickslips.....

...creating a cladding veneer of your choice

Ibstock is the largest manufacturer and supplier of brick slips in the UK. Meeting the needs of all users, our brick slip portfolio consists of three ranges covering virtually our complete product range including bricks, large format Fireborn® and Elementix®.

There are significant benefits in using brick slips from any of the three ranges:

- Excellent durability and low maintenance of natural materials.
- Environmentally sensitive and sustainable manufacture to BS14001.
- Great value.
- Where there is a standard brick, the brick slips match for colour size and texture.
- Superb choice makes it easy to match existing buildings.
- Slips are available in a standard thickness (20mm) but are available in other thicknesses to order.
- Brick slips are available to meet different requirements.

Brickslips-eco is a range of two brick slips in plain blue and plain red with a smooth texture.

They have standard brick face dimensions (215 x 65mm) with a thickness of 20mm. These brickslips, using at least 90% recycled materials, are environmentally friendly whilst having a superior size tolerance due to their method of manufacture.

Size Tolerance

Length 215mm +1/-2mm
Height 65mm +0/-2mm

	Durability	Soluble Salts	Water Absorption
Brickslip-eco - Staffordshire Blue Smooth	F2	S2	<1%
Brickslip-eco - Staffordshire Red Smooth	F2	S2	<7%

A range of casting slips is now available in a variety of colours and textures. Developed specifically for the concreting casting market, each slip has a unique key, bonding the slip into the base material prior to setting.

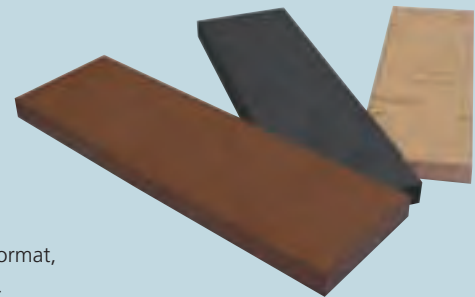

In addition to the range of slips produced to brick face dimensions, brickslips-casting are also available in all products within the standard Fireborn® range, in all the Fireborn® face sizes. For details visit the Istock website www.ibstock.com

With brickslips-choice, brick slips are available in the majority of our brick range. With over 360 different brick types, there is an incredible choice of colour and texture.

In standard brick face size of 215 x 65 mm creating standard brickwork aesthetics in slip format, all our bricks slips are 20mm thick, but can be produced in a range of thicknesses to order.

In addition large format Fireborn®, Linear and Elementix® products are available in slip format.

Brick Slip Re-cladding

In addition to using brick slip to clad new buildings, they can also be used to good effect for re-facing an existing building. The project below, recently completed in Leicestershire, shows how brick slips can significantly improve the appearance of a building, by removing the existing cement/sand render and replacing it with a new low maintenance, hard-wearing and aesthetically pleasing clay brick cladding.
